

## DO-40 Mini Skid

Our versatile attachment for your mini-skid steer (compact utility loader) is the perfect tool for those construction and renovation projects. The AERA-vator side to side tine movement levels heavy traffic areas and prepares a great seedbed with less prep work.

- Varying ground speed and hydraulic power to the attachment controls the tine aggressiveness resulting in less core waste.
- The perfect tool for renovation, aeration or for loosening soil prior to seeding or laying sod.
- Our patented connection between the ground drive rotor and the high-speed rotor shaft vibrates the tines at a high frequency, totally fracturing even the hardest of soils.
- With the optional seeder, seed placement is broadcast on top of the rotors allowing seeding in both forward and reverse reducing turnaround time.
- Patented single seed cup is capable of seeding both smaller and larger seed varieties.
