

ORCHARD FERTILIZER DISTRIBUTOR

Designed to apply granular material to orchard rows such as blueberries, peaches, vineyards and pecans

With adjustments to accommodate up to 12ft rows, each hopper has its own variable rate electric drive that will apply 31 lbs up to 2000 lbs per acre depending on row spacing. The tool bar can be operated with 1 hopper or 2 hoppers.

The 250 lb stainless hoppers' capacity can be doubled to 500 lbs by adding the extension. The optional stainless steel lid keeps your material dry. The spouts and hoses can be adjusted for precise material placement.
